

## Lecture 5 Amplitude calibration in CASA

*Tuesday, 6 June 2023 10:00 (1 hour)*

One of the major differences between calibration of connected-element interferometry data (VLA, ALMA) and calibration of VLBI data is how amplitude calibration is done. This lecture will discuss how amplitude calibration works for VLBI, how to obtain the relevant metadata in a form that can be used with CASA and the CASA tasks involved in creating and applying the amplitude calibration for VLBI data.

**Presenter:** KETTENIS, Mark
