

Lecture 9 Spectral line processing

Wednesday, 7 June 2023 11:45 (1 hour)

Spectral line data reduction largely follows the logic and steps of continuum data reduction. However, there are a few specific deviations that need to be taken into account. For instance, narrow and bright maser lines could be flagged out, and broad absorption lines could affect bandpass calibration if not taken special care of. More dos and don'ts of spectral line processing in this lecture
