

Astronomy ESFRI & Research Infrastructures Cluster Update for AENEAS Kickoff

Marco de Vos – ASTRON, NL
ASTERICS Coordinator

Asterics *versus* AENEAS

- AENEAS brings together SKA partners and eInfra providers on a specific topic (SRCs)
- Asterics brings together ESFRI projects on a broad range of topic
 - But most of them related to data!

Why Cluster Projects?

- Implementation of cross-cutting solutions for clusters of ESFRI research infrastructures
 - Stimulate cohesion, increase efficiency
 - Platform to discuss policy topics like interoperability and commensal observations
 - Platform to study generic aspects where a joint approach can transcend individual efforts

Why ASTERICS?

- Many challenging astronomical ESFRI and other research facilities being developed and built currently!
- We believe there's much to gain in working together on a wide range of aspects:
 - Reaching out: collaborations, open science
 - Handling data: massive data flows, virtual observatory
 - Connecting: policy issues, timing and networks

ASTERICS facts & figures

- Astronomy ESFRI & Research Infrastructure Cluster
- Horizon 2020 Work Programme INFRADEV-4-2014/2015 Call – “Implementation and operation of cross-cutting services and solutions for clusters of ESFRI and other relevant research infrastructure initiatives”
- Focus of ASTERICS: SKA, CTA, KM3NeT, close links to E-ELT and EGO
- Funded at 15 M€ for 4 years
- 22 partners in 6 countries, representing a major collaboration in Astronomy/Astrophysics/Astroparticle Physics
ASTRON, CNRS, INAF, UCAM, JIVE, INTA, UEDIN, UHEI, OU, FAU, VU, CEA, UVA, UGR, FOM, IEEC, IFAE, UCM, INFN, STFC, DESY, SURFnet

ASTERICS overview

DECS - Dissemination, Engagement and Citizen Science

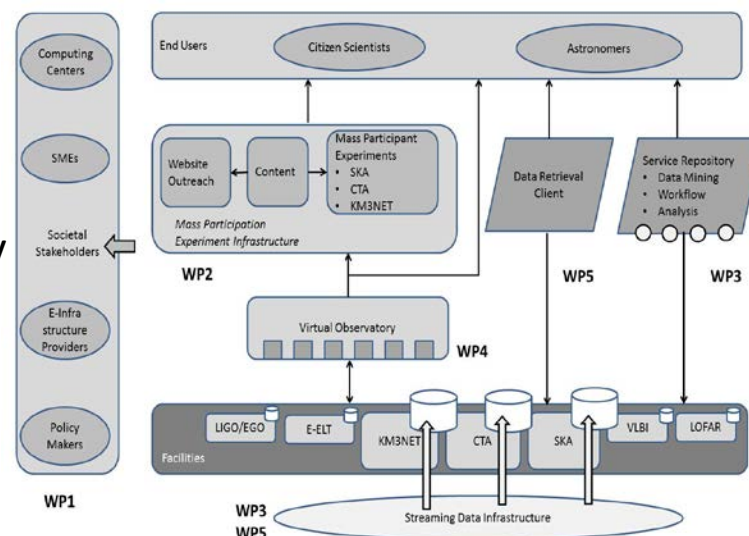

OBELICS - Observatory E-environments Linked by common Challenges

DADI - Data Access, Discovery and Interoperability

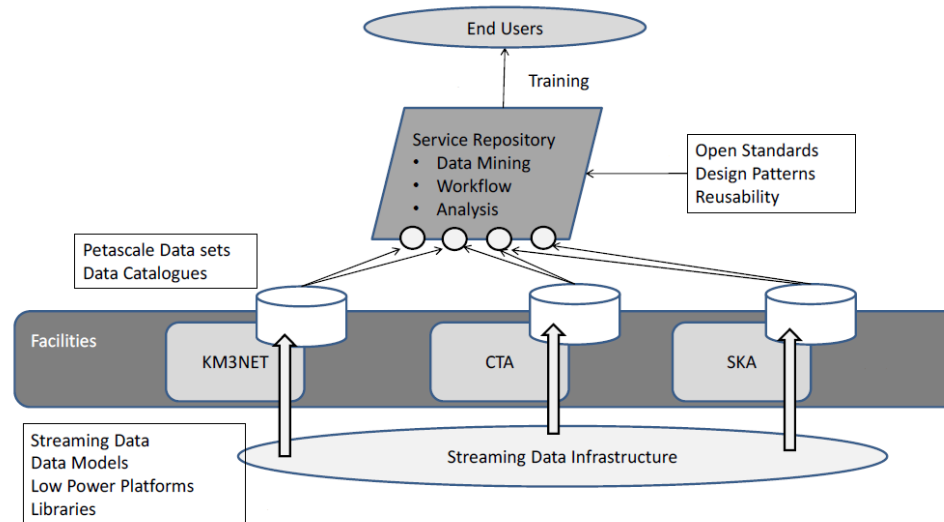

CLEOPATRA - Connecting Locations of ESFRI

Observatories and Partners in Astronomy for

Timing and Real-time Alerts

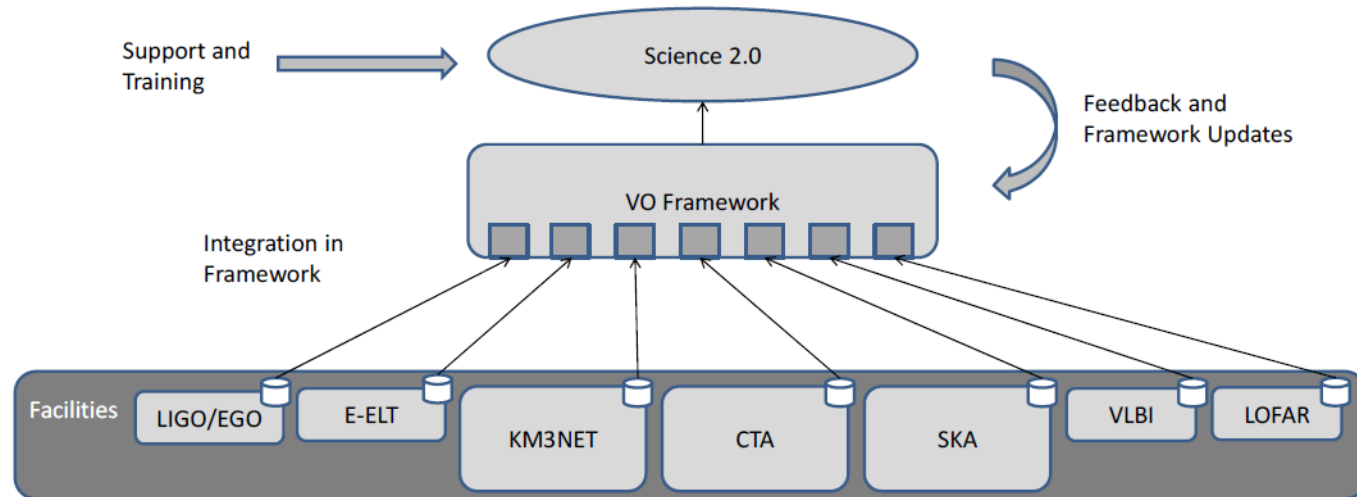

WP3 – OBELICS

Co-development for the robust, scalable, flexible handling and exploitation of then huge data streams and distributed petascale database systems

- Data Generation: open formats, streaming processing, low power computing
- Data Systems Integration: hybrid architectures, open databases, ...
- Data Analysis: selected topics (statistical analysis, imaging, workflow)

WP4 – DADI

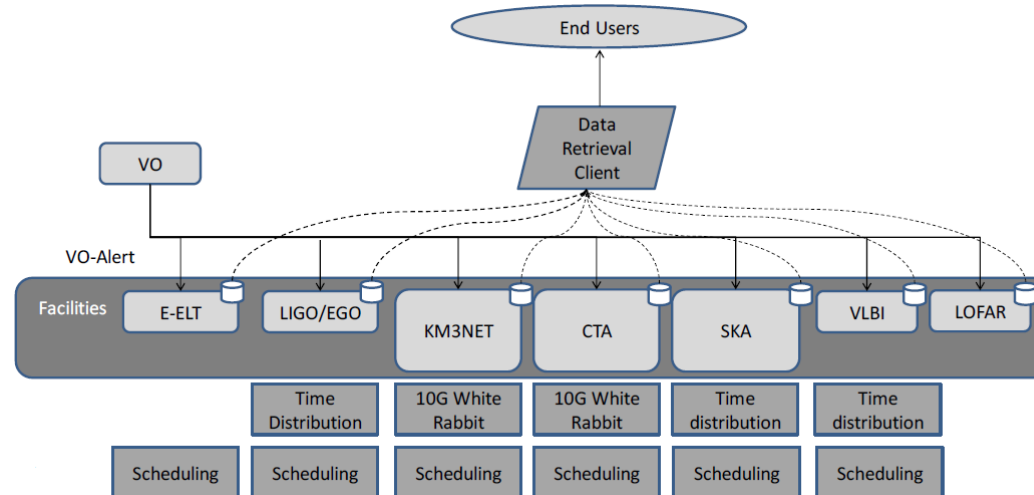

Virtual Observatory Evolution:

- Train & support
 - ESFRI staff
 - pathfinders
- Develop
 - Requirements
 - Feedback
 - Adapt

WP5 – CLEOPATRA

- Technology development for fibre connectors; relaying alerts; data streaming software; data dissemination; advanced scheduling algorithms
- Builds on WRE (White Rabbit Ethernet) and the EC EXPreS/NEXPreS projects

Synergies with AENEAS

- AENEAS can rely on the broad network of ASTERICS
 - No need to make separate multi-disciplinary links
 - Natural entrance in initiatives like European Science Cloud
- AENEAS can be efficient interface into SKA community
 - Avoids confusion e.g. in EC lobby
 - Allows especially WP3, WP5 to concentrate on generic research
- Strategic development e.g. towards SKA:
 - AENEAS community driven: (European) science interests, specific SKA oriented development
 - ASTERICS cluster driven: cohesion, overarching policy, generic topics, libraries and concepts
