The CERN-SKA Collaboration

Tuesday, 17 October 2017 12:20 (30 minutes)

The planned upgrade of CERN's LHC facility to higher luminosity is due to happen by the mid-2020s –the same timescale for SKA-1 Operations. Both facilities will produce hundreds of petabytes of data (and exabytes over time), and will need a global network of e-Infrastructures to turn this data into science. This talk will present common challenges the two projects have identified and outline plans to collaborate in order to tackle the challenges.
